

Telescoping TROM® with Shells

Ideal Application

Full-circumference, lightweight shells provide stiffness to the brace and tissue containment for effective post-operative immobilization and protected range of motion associated with ligament and fracture related surgeries. The bilateral TROM is available with the extension bars removed. The short 18-inch length allows for active rehab exercises.

Features and Benefits

- State-of-the-art TROM hinge
- Easy push-button adjustments
- Quick-release buckles allow for fast and easy strapping
- Shells provide added stability
